MATEX

The Evolution of Coating Machines

ROTO LAM

Release Machine RR1

Since 1973, MATEX is developing, building and exporting world-wide, creating machines and plants for production of artificial leather and the woven and non-woven coated or impregnated. Plants for split leather coating. Embossing and laminating plants, printing and lacquering.

Today's high technology and know-how level reached by Matex is the result of continuous daily efforts towards the evolution and innovation in close co-operation and collaboration with all the end-users in this field. The solid result of a precious heritage built up over years of experience can be realised seeing the hundreds of machines installed in Italy and abroad, including also the turn-key projects.

Today MATEX, expands the production range with a new innovative machine.

ROTOLAM

Release Machine RR1

THE ROTOLAM RELEASE MACHINE RR1 technology is an impressive example of the efficiency and innovative potential of such a joint synergistic efforts.

MATEX, thoroughly analyze the problem, define the solution and deliver an innovative, reliable and consistent surface treatment technology which will change multiple steps existing surface treatment to a one single high quality and cost efficient one step process.
The innovative Roto-Lam surface transfer technology is designed to transfer complete aesthetic and functional surface layers (pattern, colors and protective coating) in one work step from a carrier film into the final substrate in a speed that is equivalent to the speed of a printing machine.

We have developed an environmentally clean, clear and extensive surface technology concept called F.A.C.E.S. The elements of the surface technology include:

- Functionality: enhancing the performance of a product.
- Aesthetics: providing the identity in the mind of the consumer.
- Costs: meeting customer's expectations at the most economical price.
- Environmental: favorable performance over the life of the product.
- Services: that provides the confidence to purchase.
